

# Sharing your codeplug with others

You can send others your codeplug but we run into some issues -  
CPS not being the same version.  
Radio model being different.  
Codeplug being newer version.

## So how to get around all off this.

Use [Export All CSV](#)

*Note – The only setting that do not get exported or imported is the Optional Settings*

When you have Exported All the CSV files to a folder.  
Then Zip the folder up. ( I use [7-Zip](#) a Free Software )

[Lots off info on the net on how to use 7-Zip](#)

Now you can Email etc your Codeplug to others.

## If you have been sent a Zip

Download the Zip file to your PC

UN-Zip the file into a folder

Use [Import All CSV](#)

*Note – The only setting that do not get exported or imported is the Optional Settings*

Now you can send your new codeplug to the radio.

## Tips

When sharing your Codeplug, make sure you remove your info in **Radio ID List**  
When using a Codeplug sent to you. Make sure the **Radio ID List** has your ID  
number and Callsign.  
Go over the Optional Settings and set as you want them. ( [My Settings I use](#) )
