

MD380 and RT3 Ty Firmware 2017-12-06 Guide

Ty Weaver alternative FW for MD380 and RT3. GPS and Non GPS

This tool will let you update to Ty Firmware and Ty Contact CSV file.

Download Ty Tool

Tytera Flash Tool v1.08_BETA (MD380/MD390)

<https://kg5rki.com/new2/tymd380.html>

(You might need to make an account)

If you have installed other hacked Firmware that **is not** Ty's Firmware, then I would recommend you flash the radio first with Standard Firmware.

You will find this at the [MD380](#) or [RT3](#) website

Open the Tools on your computer

FIRMWARE click on Download GPS or Download NON-GPS

Have radio in DFU mode and click on **Flash**

When **Done** comes up, you can restart radio

USERDB click on Download Update

When **Number of Users xxxxx** comes up you can click **Flash**

When **Done** comes up your radio is ready

Read next section below for radio settings

You can edit your info on the Contact CSV via this link

<https://kg5rki.com/new2/usrprofile.php>

(You WILL need to make an account)
